

Inscape Publishing Electronic Profile Information Center (EPIC) Security Statement

Inscape Publishing's Electronic Profile Information Center (EPIC) family of web sites is located at www.inscape-epic.com, admin.inscape-epic.com and customerservice.inscape-epic.com. These sites are hosted on a Windows 2000 Server based computer that is routinely updated with the latest Microsoft security patches. A separate Windows 2000 Server with SQL 2000 installed provides database services. There is a dedicated secure gigabit connection between these two machines. Regularly scheduled tape back-ups are performed for all data and a hot standby server is available in the case of a major hardware malfunction in either machine. Security from the outside is provided by a port filtering firewall and by auto updating antivirus software. A limited number of Inscape Publishing employees have access to the machines and strict password policies are enforced. The computers are physically located in a secure, limited access environment with twenty-four hour video surveillance. The hosting facility also provides redundant Internet connections and emergency power generators.
